RGD Tech — Internal Financial Operations

Document ID: DOC010 | Version: 2026.1 | Department: Finance | Access Level: ADMIN

> **CONFIDENTIAL — ADMINISTRATIVE ACCESS ONLY**
> Fictional internal RGD Tech information created for the enterprise RAG demonstration.

Purpose and Scope

This document defines internal financial-operational rules used by RGD Tech administrators and authorized finance leadership. It is not intended for customer-facing support responses.

The policy covers refund authorization, exceptional financial adjustments, internal reconciliation, and operational controls.

Topic	Policy / Information
Standard refunds	Customer-service refunds that satisfy the published policy may follow the normal workflow.
Exceptional refunds	Refunds outside standard policy require elevated authorization and an auditable business justification.
Internal reconciliation	Finance reviews payment, refund, and settlement records against order records during reconciliation cycles.

Refund Authorization Matrix

Authorization depends on refund amount, reason, and whether the request follows published customer policy.

Topic	Policy / Information
Up to INR 25,000	Support may initiate a compliant refund; exceptions require administrative review.
INR 25,001–75,000	Administrative approval is required for exceptional cases.
Above INR 75,000	Admin/finance leadership approval is required before processing.
Policy exception	Any exception to published customer policy requires an auditable reason and administrator approval.

Internal Financial Controls

Administrators should preserve an auditable relationship between order, payment, return, refund, and approval records.

Topic	Policy / Information
Audit trail	Record order ID, payment ID, return ID, refund amount, reason, and approval information.
Duplicate refund prevention	Verify that no completed refund already exists for the same return.
Disputed transactions	Route disputed payment cases to the finance workflow rather than exposing internal investigation details.

RAG Access Classification

This document is classified as **admin**. Support users must not receive its contents through retrieval or context formation.

It is intentionally included to demonstrate role-aware Pinecone filtering and post-retrieval ALC validation.
