RGD Tech — Internal Inventory Strategy

Document ID: DOC011 | Version: 2026.1 | Department: Operations | Access Level: ADMIN

CONFIDENTIAL — ADMINISTRATIVE ACCESS ONLY
Fictional internal RGD Tech information created for the enterprise RAG demonstration.

Purpose and Scope

This document describes internal inventory-management thresholds, replenishment strategy, warehouse balancing, and operational decision rules.

Topic	Policy / Information
Reorder level	Inventory below the configured reorder level should be reviewed for replenishment.
Reserved stock	Reserved quantities must be considered before reporting net operational availability.
Warehouse balancing	Administrators may rebalance stock between warehouses when operationally justified.

Warehouse Operating Rules

RGD Tech operates the fictional West Hub in Mumbai and Central Hub in Nagpur for this demonstration dataset.

Topic	Policy / Information
West Hub	Primary hub for selected laptop and smartphone inventory.
Central Hub	Primary hub for selected tablet and accessory inventory.
Low-stock review	Products approaching or falling below reorder levels should enter the operations review list.

Internal Inventory Decision Rules

Inventory decisions use available quantity, reserved quantity, reorder level, recent order activity, and expected inbound supply.

Topic	Policy / Information
Priority 1	Avoid stockout risk for active products with sustained demand.
Priority 2	Review products at or below reorder level.
Priority 3	Use warehouse balancing before unnecessary replenishment where appropriate.
Discontinued products	Do not replenish discontinued products unless an administrator records an exception.

RAG Access Classification

This document is classified as **admin**. Support users are not authorized to retrieve or receive this internal strategy.

Its purpose is to create a realistic admin-only knowledge source for ALC testing.
