RGD Tech Customer Support Policy

RGD Tech | Policy and Knowledge Base | Version 2026.1 | Effective 1 July 2026

1. Support Overview

RGD Tech support is responsible for resolving customer questions, collecting relevant information, applying approved procedures, and escalating cases that require specialist or management action.

2. Support Roles

Support Agents handle normal customer queries, order status questions, basic returns, and first-level troubleshooting.

Senior Support Agents handle complex cases and supervise escalations.

Finance handles payment disputes and high-value refund approvals.

Technical Specialists handle advanced troubleshooting and technical diagnostics.

Operations manages shipment and fulfillment exceptions.

3. Priority Levels and SLA

P1: critical customer-impacting issue. Initial response target: 1 hour.

P2: major issue affecting normal use or requiring urgent intervention. Initial response target: 4 hours.

P3: standard issue. Initial response target: 1 business day.

4. Return and Refund Requests

Agents must verify the order and product before making a policy determination.

Agents should use the return and refund policies rather than promising an outcome before eligibility is established.

Refunds above INR 50,000 require Finance approval.

5. Technical Issues

Agents should follow the troubleshooting guide for supported symptoms.

If prescribed troubleshooting does not resolve the issue, a warranty or technical diagnostic case may be opened.

Agents must not instruct customers to perform unsafe repairs or unauthorized hardware modifications.

6. Escalation Rules

Payment disputes and high-value refunds should be routed to Finance.

Shipment exceptions should be routed to Operations when normal carrier handling is insufficient.

Persistent hardware faults should be routed to Technical Support.

Cases with significant customer impact or unresolved repeated contacts should be escalated to a Senior Support Agent.

7. Customer Communication

Agents must communicate the applicable policy accurately and avoid promising exceptions without approval.

Sensitive credentials must never be requested.

Case notes should contain the relevant order, product, issue, actions taken, and resolution.

8. Ticket Closure

A ticket may be closed when the requested action is completed, the customer has been informed, or the case has been appropriately transferred.

Open dependencies such as pending refunds or inspections should remain visible until resolved.

9. FAQs

Q: Who approves refunds above INR 50,000? A: Finance.

Q: Who handles advanced hardware troubleshooting? A: Technical Support.

Q: Where is the customer's actual order status stored? A: In the transactional database.
